About me

Andrey Grekov, 22 years young, born and grew up in Moscow.

I currently work at AMarkets Company, where I spend most of my time crafting and working on awesome projects.

Always strive for new knowledge and technologies and apply them in practice, improve the professional level.

Work Experience (2008 - now)

AMarkets

2012 - now

Support and development of personal area, quotation services.

Personal Area

Personal Area is based on the framework Ruby On Rails. It includes features for customers, partners and the administrator. The customer has the ability to replenish a personal account, transfer funds to other accounts, to create a PAMM and portfolios, to join them, etc. Access client accounts analysis, various statistics and indicators. Partner has the opportunity to attract new customers to the system. The partner receives a different remuneration for the given customer, which depend on the customer's turnover during the trade or completions. Administrators can control the various trading tools, access to client statistics, etc.

Quotation Services

Quotes service is based on a stack Node.JS, Erlang, C #, Redis. Representing a variety of applications. Collect and process candles and quotes in real time. At the peak of quotations comes 200 updates per second, and each customer receives a notification about this. Initially caching application was written on Node.JS, but almost completely rewritten in Erlang.

Front Site

Nothing special about this project is not, it just for show.

Freelance

2008 - now

Individual work on the part. Develop my own projects. Some of them:

Predictions quotations - May 2015 - August 2015

Service guessing the value of quotes with a probability of 73-75%, which will in a minute.

Payment notification - May 2015

Client payment notification machine. A small project based on Raspberry Pi, that can listen to event messages about client payments and make sound notify for colleagues about it. Sound notifies are varying depending on payment amount.

Service advertising - August 2014 - February 2015

Members are divided into two groups - webmasters and advertisers. Webmaster connects your page / group of one of the social networks (VKontakte, Facebook, Instagram, Google+), and sets the value of advertising on your page. Advertiser creates advertising and sets his thresholds for filtering groups. Advertiser sees a list of matching groups and webmaster sees a list of advertisements.

Play4Bit - August 2012 - December 2012

Service, in which the user is a quest reward.

Application VKontakte "My videolist" - December 2010 - April 2011

Lets make a list of TV shows and watch them later. The application is able to search for information on adding a series of open source, supports counter series and automatically search for current series.

Application VKontakte "Music Sorter" - August 2010

The app sorts the music user. Sorting algorithm has been developed for the API VKontakte, which allows you to sort in seconds huge lists.

Game servers - September 2008 - April 2012

Development and support of personal area, modification of the game server and client.

RuSoft

2010 - 2011

Website development.
